

Duolingo — UI Evaluation Journey

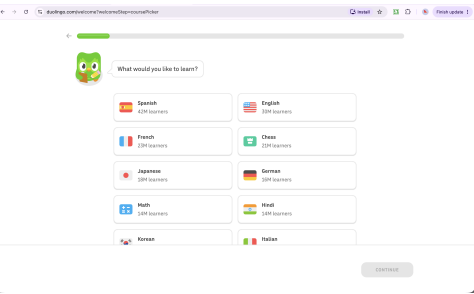

16 annotated screenshots · Full onboarding-to-completion flow

This document provides a labelled walkthrough of the Duolingo web experience as captured for the IUI Evaluator sample evaluation. Each screenshot is annotated with its phase, stage, and IUI significance. Use alongside the full evaluation report (iui-evaluation-duolingo.pdf).

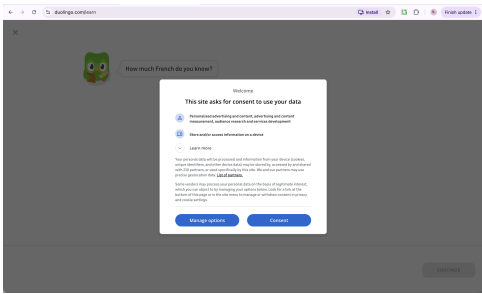

ONBOARDING	PLACEMENT TEST	LESSON LOOP	COMPLETION
------------	----------------	-------------	------------

PHASE 1 — ONBOARDING

Stage 1 · Course Picker	Stage 2 · Prior Knowledge Self-Report
-------------------------	---------------------------------------

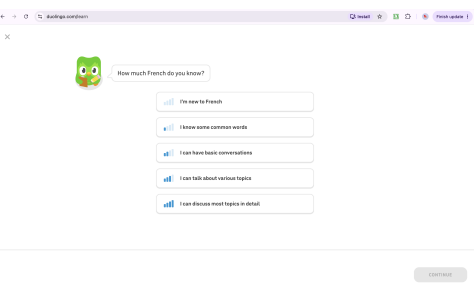

User selects what to learn. No prior context collected — the system starts generic.

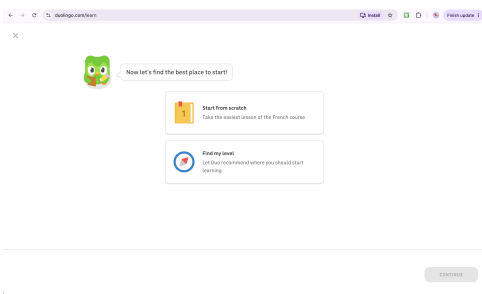

"How much French do you know?" — five self-reported levels offered. Notably, this collects declared knowledge, not measured knowledge.

Stage 3 · Placement Choice	Stage 4 · Data Consent
----------------------------	------------------------

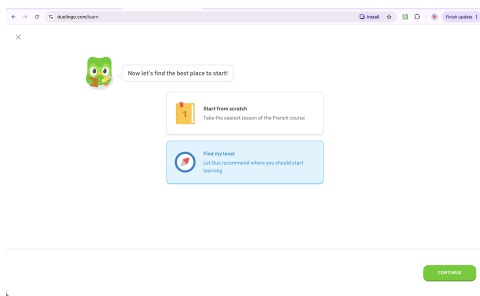

"Find my level" offers adaptive placement as an alternative to starting from scratch. A meaningful IUI decision point — the system offers to measure rather than assume.

Consent modal before placement begins. Relevant IUI note: the consent framing does not explain how personal data informs the adaptive experience.

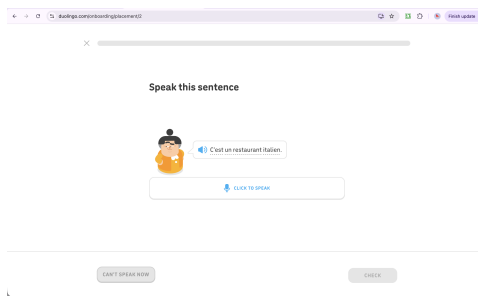

PHASE 2 — PLACEMENT TEST

Stage 5 · Voice Exercise

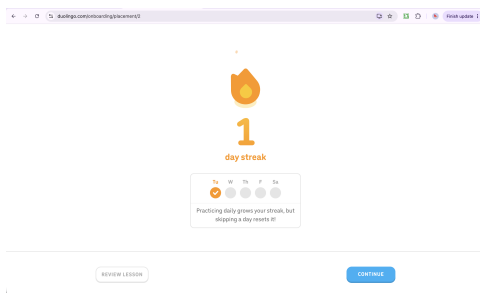

"Speak this sentence" — multimodal input assessed during placement. Good naturalness; "Can't Speak Now" escape shows graceful degradation.

Stage 6 · Placement Score Result

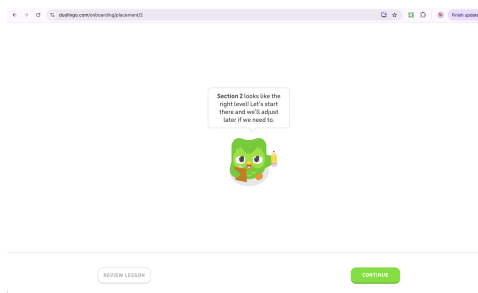

Score (10) displayed with "connects to real-life skills" framing. The score is surfaced but not explained — what does 10 mean? What was assessed?

Stage 7 · Section Placement Confirmed

"Section 2 looks like the right level — we'll adjust later if we need to." Adaptive entry point set. The confidence is visible; the reasoning is not.

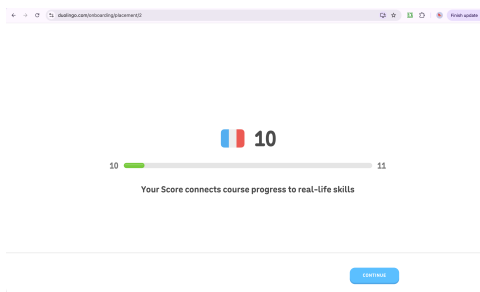

Stage 8 · Streak Initiated

1-day streak introduced immediately after placement. Temporal commitment mechanism activated before the first real lesson begins.

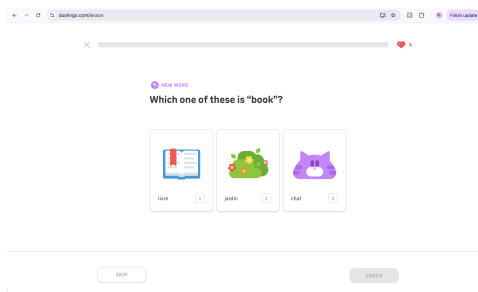

PHASE 3 — LESSON LOOP

Stage 9 · Home Dashboard

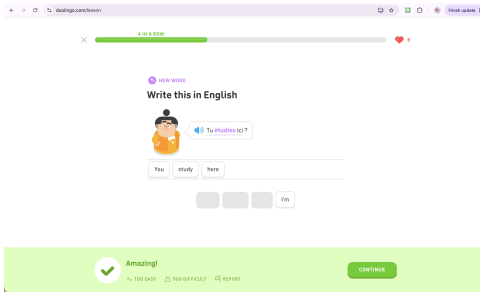

Lesson map, XP, streak counter, hearts, daily quests, leaderboard unlock prompt. Multiple systems visible simultaneously — rich but potentially opaque to a new user.

Stage 10 · Exercise — Image Selection

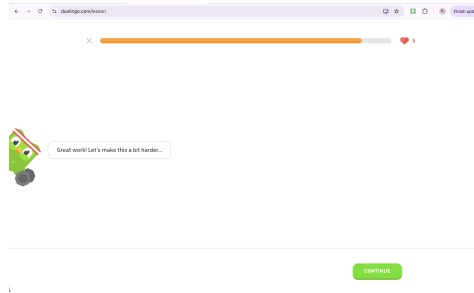

"Which one of these is book?" — vocabulary via image choice. Clean, low-friction format. Keyboard shortcuts (1, 2, 3) present.

Stage 11 · Exercise — Translation with Feedback

"Write this in English" — word tile translation. Correct answer shown with "Amazing!" feedback and "TOO EASY / TOO DIFFICULT / REPORT" controls beneath.

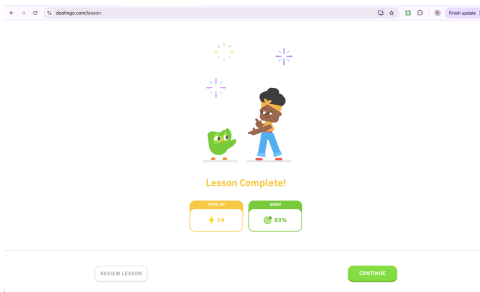

Stage 12 · Difficulty Escalation (Key UI Moment)

"Great work! Let's make this a bit harder..." — adaptive escalation triggered by consecutive correct answers. The decision is made but not explained. This is the single most UI-significant moment in the journey.

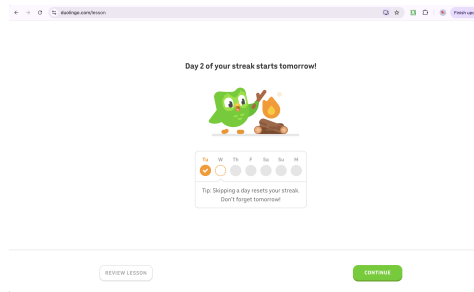

PHASE 4 — COMPLETION

Stage 13 · Lesson Complete

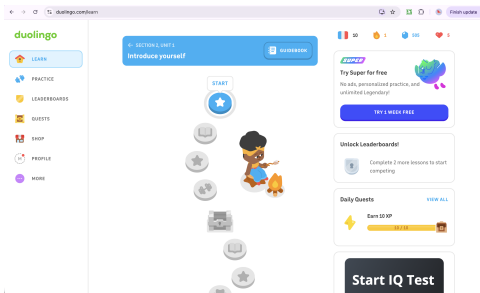

XP earned (14) and accuracy (89%) shown. No skill-level feedback — the result is gamified (XP) rather than informative (what improved?).

Stage 14 · Streak Reminder

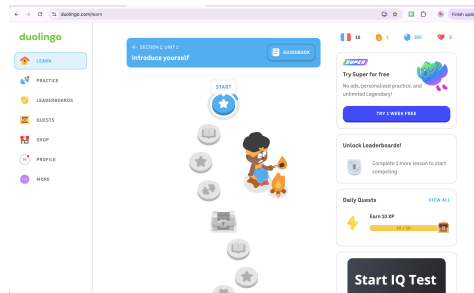

"Day 2 of your streak starts tomorrow! Skipping a day resets your streak." Proactive retention nudge. Temporal context used effectively.

Stage 15 · Home Dashboard Post-Lesson

Updated home state after completing a lesson. Quest progress updated, leaderboard unlock counter advanced. Progress is visible but surface-level.

Stage 16 · Return to Learn

Full home dashboard showing Section 2, Unit 1 ready to continue. The IQ Test prompt appears — a new adaptive feature surfaced proactively.

Evaluation score: 23/35 (66%) — Developing IUI. See [iui-evaluation-duolingo.pdf](#) for the full scored report, improvements, and wireframe sketches. | IUI Evaluator v1.0 by Momina Wahab | literature-grounded rubric
